*** p < 0.01, ** p < 0.05, * p < 0.1. OLS regressions with MODIS cropveg trend as the dependent variable. 'Conflict Incidence' takes on values 1-5 moving from low levels of conflict occurrence to high levels of conflict occurrence. 'c_match', 's_match', and 'pres_pidmuni' variables indicate mutually exclusive categories compared against a category where there is no match in ideology. 'Exposure to State' = proportion of years (1998-2009) that the non-combatant population comes in contact with government forces. 'Exposure to Guerilla' = the same definition, but for guerilla forces. Table shows robust SEs.
