***p < 0.01, **p < 0.05, *p < 0.1. OLS regressions with MODIS cropveg trend as the dependent variable. 'State-Guerila Dispute' = the proportion of years (1998-2009) that government and guerila forces have a dispute in a given municipality. 'c_match', 's_match', and 'pres_pidmuni' variables indicate mutually exclusive categories compared against a category where there is no match in ideology. 'Exposure to State' = proportion of years (1998-2009) that the non-combatant population comes in contact with government forces. 'Exposure to Guerilla' = the same definition, but for guerila forces. Table shows robust SEs.
